

BB-Custom

- ✓ When design leads, our functionality follows with seamless integration.
- ✓ Designed for the sensitivity of listed buildings, the ambition of premium architecture and façade installations where every detail is on show.
- ✓ Coloured panels are a deliberate choice — one that deserves protection designed to the same standard.
- ✓ Matched to any RAL colour — produced to order for projects that demand precision.
- ✓ The same proven BirdBlocker system — trusted globally, and the preferred solution of the world's leading solar panel and mounting system manufacturers.

Design & Function: BB-Custom

In some projects, design is leading because appearance is key. **BB-Custom** is testimony to the fact that this does not have to come at the expense of functionality: the Custom line combines premium protection, seamlessly integrated with coloured solar panels.

The creation of custom colours for BirdBlocker's time-tested birdproofing allows high-end projects to extend their quality offering to lasting protection of the solar installation against birds, rodents and other unwanted guests — preventing fire hazards, soiling and warranting productivity as well as longevity.

Listed & Heritage Buildings

Modernizing classic buildings while preserving their heritage appearance can be a challenging hunt for the right building materials. Custom coloured panels can be the acceptable compromise to conserve the appearance whilst incorporating much-needed renewable technologies. When it comes to preserving what was made well in the past, to remain available for the future, safety and longevity cannot be an afterthought. With the **BB-Custom** line, what was made with thought and enhanced with care, is protected in the same manner. Whether it needs to match terracotta, slate or verdigris, **BB-Custom** is sympathetic to the original character of the building.

Design & Architecture

BB-Custom is made to disappear. When architecture takes the lead, incorporating solar power as a design feature is a task in itself. The Custom line does justice to design principles where form and appearance are key. From roofing to façade systems, **BB-Custom** opens new potential to make solar power generation visually appealing. Like an invisibility cloak, it seamlessly integrates building materials with solar panels, hiding mounting systems in the process. **BB-Custom** complements the visual integrity of good architecture.

Made custom to order

BB-Custom offers proven technology in a custom fashion. It is not an off-the-shelf product and each project is a joint effort, created in every RAL colour to your specifications. Using your reference colour, each **BB-Custom** is created from the same UV-stabilised, anti-rodent-enforced material and proven BirdBlocker construction as the standard range, so the custom finish does not compromise durability, fit or performance.

Available in BB85, BB125, and BB200.
